

User Guide

A short walkthrough of the things you'll use day-to-day.

Most people are running with it confidently in under 10 minutes.

What ZoomChat does

ZoomChat dispatches a friendly bot into your Zoom meetings, pulls every chat message into a single unified feed, and lets you save the highlights, reply back into the room, or pop the conversation onto a secondary screen for a host or presenter to read live.

Getting started

1. Open the app

You have two options:

- **The ZoomChat .app** that was installed on your computer — double-click the icon (typically in your Applications folder)
- **Any web browser** — visit zoomchat.ryteproductions.com

Both behave identically. The .app is just a tidy frame around the same thing.

2. Sign up or sign in

First time? Click **Sign up**, enter your email and a password. You'll be signed in instantly. (Check your inbox shortly after for a one-click verification email.)

Coming back? **Sign in** with your existing email and password.

3. Pick a plan

You start on a **30-minute free trial** with one concurrent meeting bot — plenty to evaluate the tool. When you're ready to keep going, click your **avatar (top right) → Upgrade — view plans**:

Plan	Price	Concurrent bots
Solo	\$49.99/mo	1
Pro	\$199/mo	5
Studio	\$499/mo	20

You'll be redirected to Stripe's secure checkout. Cancel any time from your account.

The basics

Connect to a meeting

In the **Connect** tab (left sidebar):

1. Paste the Zoom **Meeting ID** (just digits — spaces and dashes are fine)
2. Paste the **Passcode** if the meeting has one
3. Give the room a **friendly name** (e.g. "Main Stage", "Q&A Room") and pick a color
4. Set the **Bot Display Name** — this is how the bot appears to people in the meeting (e.g. "Audience Q&A" or "Producer Notes")
5. Click **Connect**

Within seconds, the bot joins your Zoom meeting. Once admitted from the waiting room (if the host has one enabled), chat messages start streaming into the feed.

Reading the feed

The middle of the screen shows every message from every connected room, newest at the bottom. Each message shows the sender's name, the room they're in (color-coded), the timestamp, and the message text.

Use the **Rooms** tab (left sidebar) to filter the feed to just one room when you need focus.

Saving messages

Click the **bookmark icon** on any message to save it. Saved messages appear in the **Saved** tab (left sidebar). From there you can:

- **Copy** the message as plain text (with attribution)
- **Export as PNG** — a square, social-ready quote card (1080×1080)
- **Export all to CSV** — for record-keeping or reporting
- **Add a note** to remember why you saved it

Replying into a room

Each message has a **Reply** button. Click it, type your message, hit **⌘ + Return**. The reply goes into that specific Zoom meeting via your bot.

Broadcasting to every room

At the top of the feed, click the **Broadcast** composer to send the same message into every connected meeting at once. Useful for “we'll start in 5 minutes” announcements during multi-room events.

Tools for live events

Presenter display

Click the **pop-out icon** in the header (next to the gear). A borderless window opens — drop it on a secondary monitor, double-click to go full-screen. Drag anywhere to reposition.

Use this for a host, presenter, or screen behind the speaker so they can read audience chat live. Font scale is independently adjustable in **Settings → Typography → Display View Scale** (1× to 3×).

Rosters

If you run the same event regularly, save your meeting list as a **Roster** in the Rosters tab. Then before the show, click **Deploy** once and every bot gets dispatched in parallel. Perfect for recovery if you ever need to close and reopen the app mid-event.

Sessions

Every time the app launches, a new session starts to group everything that happens. You can:

- **Rename** the current session to something meaningful for the event ("Acme Q3 Kickoff" instead of the default timestamp)
- **End session and start new** between events so the feed and saved list reset cleanly
- **Browse past sessions** to see message counts and download CSVs of saved messages from any prior event

Custom branding on quote cards

Settings → Branding → "Brand mark (PNG exports)" lets you put your company name (e.g. "Acme Corp Q3 2026") in the bottom-right corner of exported PNG quote cards. Leave blank for no footer.

Account management

Click your **avatar (top right)** to open the account menu:

- See your current plan and (if on trial) minutes remaining
- **Upgrade — view plans** — pick or switch tiers (trial / canceled users)
- **Manage subscription** — opens the Stripe Customer Portal where you can change payment method, switch tiers, download invoices, or cancel (paid users)
- **Sign out**

Team members (admin only)

If you're an admin, **Settings → Team** lets you:

- Invite a teammate by email (they get a link to set their password)
- Change roles (admin / operator)
- Remove members
- Revoke pending invitations

Operators can use everything except billing and team management. Admins can do it all.

Tips

- **⌘R** in the .app pulls the latest version without quitting
- **Esc** in the presenter window exits full-screen first, then closes the window on a second press
- **Customize colors and fonts** in Settings — six theme presets, plus full custom colors. Changes also apply to the presenter window via live sync.
- The bot can only see chat — it does **not** see or record video or audio. It's a chat-only observer.

Help

Stuck? Email theo@ryteproductions.com and Theo will get back to you within one business day.
